企业概述

浙江中德自控科技股份有限公司(原中德机械集团有限公司)是集研发、生产、销售、服务于一体的专业控制阀制造商。自1992年创立以来，中德致力于发展切断阀专业领域技术，使我们始终处在国内切断阀领域的技术领先地位。在我们二十多年的发展历程中，中德人专业、聚焦、坚持不懈来打造切断阀品牌，其中气\电\液动高性能蝶阀、高性能球阀、高温耐磨球阀、高温蝶阀、快速切断闸阀等产品广泛应用于石油、化工、天然气、煤化工等高端领域，并获得了众多用户朋友的高度信任。

中德集团现已拥有专业阀门研究中心和一流的生产平台，并通过了ISO9001：质量体系认证，美国石油学会API6D/609产品认证、API6FA/607防火认证，特种设备压力管道制造许可“TS认证”。是中国石化、中石油、中海油、中化、神华、煤化工等领域的一级供应商。先后被评为“中国著名品牌”，“省级星火示范企业”，“国家高新技术企业”，“省明星企业”，连续五年被工行评为“AAA信用企业”。

“客户的满意我们视之为生命”为此中德在国内建立了十二个直销和服务网络，在服务市场的广度和深度上都具有独创性。我们能满足您的需求，我们给您提供“安全、可靠、省心”产品的同时，我们的产品价值永远大于产品价格。无论您在那里，我们具有丰富经验和专业知识的团队都能给你提供“认真、负责、快速”的优质服务。我们坚守“一个电话，一天内到达，一次性成功”的服务承诺。

“以人为本，以德兴业”是中德企业文化的核心，是中德人做人做事的标准，中德人将以“以诚会友，以德待友”来衬托我们过硬的产品质量和一流的服务。中德人厚积薄发，再立潮头，全力打造国家高端切断阀先进制造企业，致力于加快我国切断阀的国产化应用进程，以更好地实现顾客满意度的最大化，中德愿与您精诚合作，共创美好的明天！

BRIEF INTRODUCTION

Zhejiang Zhongde Automatic Control Technology Co., Ltd. (formerly known as Zhongde Machinery Group Co., Ltd.) is a professional control valve manufacturer integrating research, development, production, sale and service. Since its establishment in 1992, Zhongde has been devoted to developing specialized technologies of shut-off valves, keeping us always at the leading position in Chinese shut-off valve industry. During more than twenty years of development, Zhongde personnel are building the brand of shut-off valves with specialization, concentration and perseverance. The products such as high performance butterfly valves, high performance ball valves, high temperature anti-wear ball valves, high temperature butterfly valves and quick shut-off gate valves with pneumatic, electric and electro-hydraulic driving are widely applied in petroleum, chemical industry, natural gas, coal chemical industry and other high-end fields, receiving deep trust from users.

Now Zhongde Group has set up the professional valve research and development center and first-class production platforms. It has successively obtained the ISO9001: quality system certification, API6D/609 product certification, API6FA/607 fire safety certification and special equipment (pressure pipes) manufacturing license TS certification. It is a first-tier supplier of SINOPEC, CNPC, CNOOC, CHEMCHINA, Shenhua Group, coal chemical industry and other fields. It has been successively awarded such honors as “China Famous Brand”, “Spark Model Enterprise in Zhejiang Province”, “National High-tech Enterprise”, “Star Enterprise in Zhejiang Province”, and has been approved as a “Class AAA Creditable Enterprise” by the Industrial and Commercial Bank of China for five years in succession.

“Customer satisfaction is regarded as our life”. For this, Zhongde has established 12 sales and service networks, which are creative both in breadth and depth of serving the markets. We can meet your demands. We will provide you with safe, reliable and trustworthy products and the value of our products is much higher than their price. Wherever you are, our team will offer serious, responsible, fast and high quality services to you with their rich experience and professional knowledge. We always keep our service promise of “one telephone, arrival within one day and success in one step”.

“Human oriented, booming business by morals” is the core idea of Zhongde Enterprise, and the standard followed by Zhongde personnel in conducting themselves and handling affairs. Zhongde personnel will offer high product quality and top-ranking services with the attitude of “meeting friends with sincerity, treating friends with morals”. Accumulating profoundly and working ceaselessly and unremittingly, Zhongde personnel are making all efforts to create an advanced manufacturing enterprise of high-end shut-off valves in China, accelerate the process of localization of shut-off valves and realize maximized customer satisfaction. Zhongde hopes to cooperate with you faithfully and create a brilliant future together!

概要

ZS/DWy系列气/电动三偏芯高性能密封蝶阀是我公司在引进国外先进技术的基础上进行特殊设计、精心制造的。本系列蝶阀分为调节型、二位切断型、快速切断调节型三种。三偏芯密封型蝶阀阀板采用三偏芯结构，密封组件分两种形式：一是采用了金属U型弹性阀座。阀板形状为椭圆形圆锥体，通过挤压U型弹性阀座使阀座变形，直到阀座与阀板椭圆形圆锥密封面紧密吻合而达到密封。二是采用多层次复合式密封结构，密封副部分采用不锈钢片夹弹性密封片，阀体密封面采用整体堆焊结构。阀板组件为椭圆形圆锥体，使其具有金属硬密封和弹性密封的双重优点，该阀密封圈与阀座接触面是“锥中锥”结构，两个锥均为斜锥。密封圈与金属阀座之间的接触角轻微的“楔块效应”，使密封圈发生柔动和径向压缩。该结构减少了阀门的启闭力矩，使阀门间的摩擦力降到最低，延长了阀门的使用寿命。气/电动蝶阀广泛应用于冶金、石油、化工、轻工、电力等工业部门在生产过程中进行就地自动调节和远距离自动调节。本产品具有密封性能优良，使用寿命长、体积小、重量轻、流通能力大，结构简单合理，易于维修、保养等特点。执行机构是以与立推式气动执行机构的组合为标准产品，也可与电动式或液动式执行机构组合。(见图1)

Summary

The ZS/DWy series pneumatic/electric three-eccentric high performance sealing butterfly valve is a specially designed and carefully manufactured product on the basis of introducing foreign advanced technology. The series butterfly valves include three types such as control type, two-position shut-off type and fast shut-off control type. The disc of the three-eccentric sealing butterfly valve adopts three-eccentric structure. The sealing assembly includes two forms: one is the metal U type elastic seat. The disc form is oval cone. Through extruding the U type elastic seat, the seat is deformed until the seat and disc oval cone sealing face fit tightly with each other to realize sealing. The other is to adopt multilayer compound sealing structure. The sealing pair adopts stainless steel sheet and elastic sealing sheet. The body sealing face adopts integral overlaying welding structure. The disc assembly is oval cone, which has advantages of metal hard seal and elastic seal. The contact face of the seal ring and seat is “cone in cone” structure, and the two cones are all bevel cones. The contact angle between the seal ring and metal seat produces light “wedge effect”, making the seal ring produce flexible movement and radial compression. The structure reduces opening and closing torque of valve, minimizes the friction between valves and prolongs service life of valve. The pneumatic/electric butterfly valve is widely used for local automatic adjustment and remote automatic adjustment during production in metallurgy, petroleum, chemical industry, light industry, electric power and other industries. The product has such features as good sealing performance, long service life, small volume, light weight, high flow capacity, simple and reasonable structure, easy maintenance and servicing, etc. The product combined with the vertical push type pneumatic actuator is the standard product. The product can also be combined with electric or hydraulic actuator (see figure 1).

特点

- Wy三偏芯金属密封蝶阀采用金属U型弹性阀座，阀座为浮动式，具有自动调整中心的功能，密封性能好，具有自清扫与剪切功能，适用于含有轻微颗粒及纤维状的介质。
- 三偏芯多层次复合式密封采用不锈钢片夹弹性密封片，充分利用特有的凸轮效应，而且完全消除了90°行程中实现阀门的开启时，阀座与密封圈瞬时脱落，消除摩擦磨损。
- 阀板采用三偏芯结构，密封面全部堆焊硬质合金，耐磨性好。
- 阀座具有自补偿结构，增加了阀门的使用寿命。
- 阀门流量特性为近似等百分比曲线，可作为调节与切断。
- 满足API607防火要求。

Features

- The Wy three-eccentric metal seal butterfly valve adopts metal U type elastic seat. The seat is floating type, with the automatic center adjusting function, good sealing performance, and self-cleaning and shearing function. It is suitable for media containing granules and fibers.
- The three-eccentric multilayer compound seal adopts stainless steel sheet and elastic sealing sheet, which makes use of the unique cam effect and thoroughly eliminates instant dropping of seat and seal ring during valve opening and closing at 90° travel, and eliminates friction and wear.
- The disc adopts three-eccentric structure, and the sealing face adopts hard alloy overlaying welding with good anti-wear performance.
- The seat has self-compensation structure, which enhances the service life of valve.
- The valve flow characteristic is approximate equal percentage curve. It can be used for control and shut-off.
- It meets the API607 fire-proof requirements.

主要技术参数

阀体

型式: 扁平偏置铸造体

阀门口径: U型金属环2"~72", 多层复合密封2"~104"

公称压力: ANSI 150LB~ 900LB

连接: 法兰型或对夹型

材质: A216 WCB、A217 WC5、A217 WC9、A351 CF8M

A351 CF8、A351 CF8M

结构长度: 见表5-1~8-2(P16~22)

阀盖: 标准型-29~+230°C

加长型+230~+650°C -46 ~ -30°C

但需注意各材料的使用温度、压力范围。见表1(P05)

填料: PTFE, 柔性石墨, 镍基丝增强柔性石墨

本体涂层: 银灰色(环氧树脂)

当本体为不锈钢时, 不加涂层

阀内组件

阀板型式: 三偏芯旋转式

阀座型式: U型金属环 多层复合式密封

流量特性: 近似等百分比

材质处理: 本体、阀板、座环、阀杆等材质组合、处理请参见表2-1~2-3(P06~07)

额定Cv值: 请参见表3(P08)

额定行程: 0 ~ 70°或0 ~ 90°

阀座泄露率: ANSI Class IV~VI

最大阀内压力: 请参见表4-1~4-5(P14~15)

外型尺寸: 请参见表5-1~8-2(P16~22)

产品重量: 请参见表5-1~8-2(P16~22)

Main technical parameters

Body

Type: Flat offset casting

Valve size: U type metal ring 2"~72", multilayer compound seal 2"~104"

Nominal pressure: ANSI 150LB~ 900LB

Connection: Flanged type or wafer type

Material: A216 WCB, A217 WC5, A217 WC9, A351 CF8M

Face-to-face dimension: See tables 5-1~8-2(P16~22)

Bonnet: Standard type -29~+230°C

extended type +230~+650°C -46 ~ -30°C

Notice the range of working temperature and pressure for different materials. See table 1(P05).

Packing: PTFE, flexible graphite, nickel-based wire reinforced flexible graphite

Body coating: Silver grey (epoxy resin)

No coating shall be added if the body material is stainless steel.

Trim

Disc type: Three-eccentric rotary type

Seat type: U type metal ring, multilayer compound seal

Flow characteristic: Approximate equal percentage

Material treatment: Please refer to tables 2-1~2-3(P06~07) for the material combination and treatment for body, disc, seat ring and stem.

Rated Cv value: Please refer to table 3(P08).

Rated travel: 0~70° or 0~90°

Seat leakage: ANSI Class IV~VI

Maximum valve closing pressure: Please refer to tables 4-1~4-5(P14~15).

Outline dimensions: Please refer to tables 5-1~8-2(P15~21).

Product weight: Please refer to tables 5-1~8-2(P15~21).

图5 结构原理 Figure5 Structure and principle

三偏芯金属硬密封结构

金属密封蝶阀为三偏心阀板为椭圆形锥体(图5-1), 阀座采用金属材料, 具有较好弹性, 同时设有补偿机构, 阀座磨损时自动补偿, 偏心结构图减少阀座磨损, 提高使用寿命。

三偏心硬密封蝶阀堪称顶尖过程控制阀门, 具有不同于其他任何阀门的设计特点。三偏心设计使此阀成为高温, 高压和防火应用中气泡级密封的理想的硬密封阀门。由于阀座与阀板密封面间的“零磨擦”使其力矩降低, 寿命增加。(见图5-2)

Three-eccentric metal hard seal structure

The three-eccentric disc of the metal seal butterfly valve is an oval cone (figure 5-1). The seat is made of metal material, which has good elasticity and compensation mechanism. Automatic compensation can be realized in case of seat wear. The eccentric structure reduces seat wear and enhances service life.

The three-eccentric hard seal butterfly valve is known as the advanced process control valve. It has design features different from other valves. The three-eccentric design makes the valve an ideal hard seal valve for bubble level sealing in high temperature, high pressure and fireproof applications. The “zero friction” between seat and disc sealing faces reduces its torque and enhances its service life (see figure 5-2).

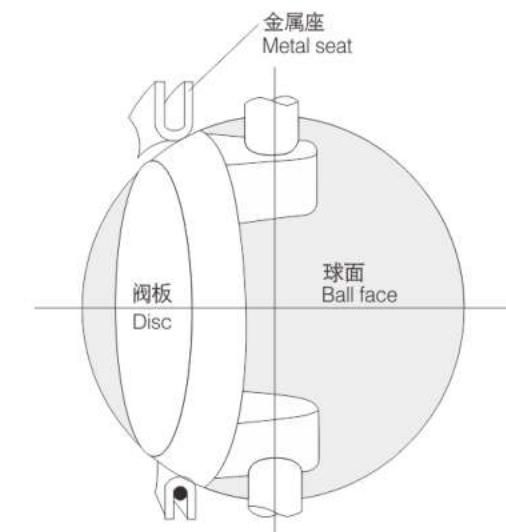

图5-1 阀板结构图
Figure 5-1 Disc structure figure

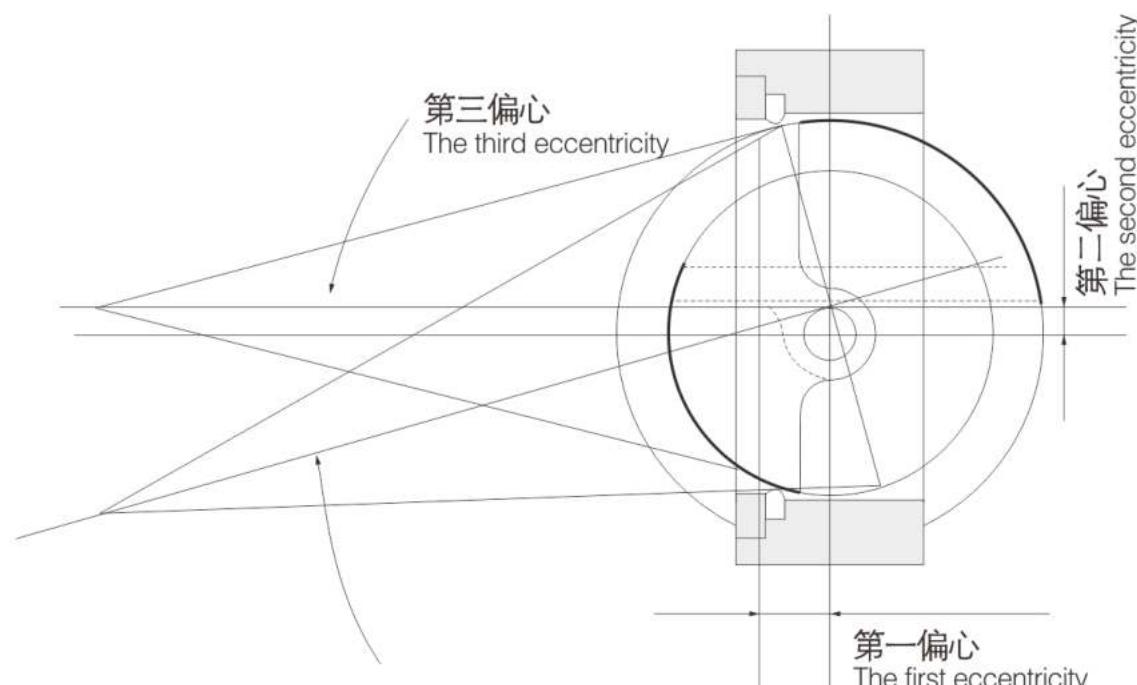

图5-2 三偏心金属硬密封结构图
Figure 5-2 Three-eccentric metal hard seal structure figure

三偏心硬密封蝶阀的阀板与密封组件采用金属U型弹性阀座和三偏心阀板结构。阀板形状为椭圆形锥体, 其表面堆焊硬质合金, 耐磨性极好。浮动式U型不锈钢阀座具有自动调整中心的功能。当阀门打开时, 椭圆形圆锥体阀板的密封面先脱离U形弹性阀座, 然后再旋转, 可大大降低磨擦阻力及表面磨损, 减少了阀门开启力矩、延长阀门使用寿命。关闭时阀板旋转, 在偏心轴的作用下, 通过阀板密封面的轴向作用力, 使弹性阀座进行自动调整中心, 阀座随阀板的作用力而发生形变, 直到阀座与阀板椭圆形圆锥封面紧密吻合, 从而保证了密封可用于高压工况。

The disc and sealing assembly of the three-eccentric hard seal butterfly valve adopts the metal U type elastic seat and three-eccentric disc structure. The disc is oval cone, and its surface is subject to hard alloy overlaying welding with excellent anti-wear performance. The floating type U stainless steel seat has the function of automatic center adjusting. When the valve is opened, the sealing face of the oval cone disc will first leave the U type elastic seat, and then it turns, so that the friction resistance and surface wear can be greatly reduced, valve opening torque is reduced, and valve service life is prolonged. During closing, the disc turns. Under the action of the eccentric shaft, through the axial force of the disc sealing face, the elastic seat carries out automatic center adjusting. The seat will produce shape change according to the disc force, until the seat and disc oval cone sealing face tightly fit with each other, so as to ensure that the seal can be used for high pressure service conditions.

三偏芯复合式密封结构 Three-eccentric compound type sealing structure

三偏心复合式密封蝶阀阀板采用独特的三偏芯结构, 阀座密封面为阀体本体堆焊层, 密封圈采用不锈钢夹弹性材料(见图5-3和图5-4)。阀板充分利用了凸轮效应原理, 实现了阀板在90°行程中阀座与密封圈瞬时脱落, 减少阀座与密封圈轴之间的摩擦。从几何形状上使得阀座与密封圈在阀门整个开关行程完全脱离。这一独特的偏心组合, 既利用了凸轮效应, 又消除了磨损泄漏难。

The disc of the three-eccentric compound type seal butterfly valve adopts unique three-eccentric structure. The seat sealing face adopts body overlaying welding and the seal ring adopts stainless steel and elastic materials (see figure 5-3 and figure 5-4). The disc makes use of the cam effect principle to realize instant dropping of seat and seal ring when the disc is in 90° travel, so as to reduce friction between seat and seal ring shaft, and realize complete disengagement of the seat and seal ring during the whole valve opening and closing travel from geometrical shape. This unique eccentric combination not only uses the cam effect, but eliminates wear.

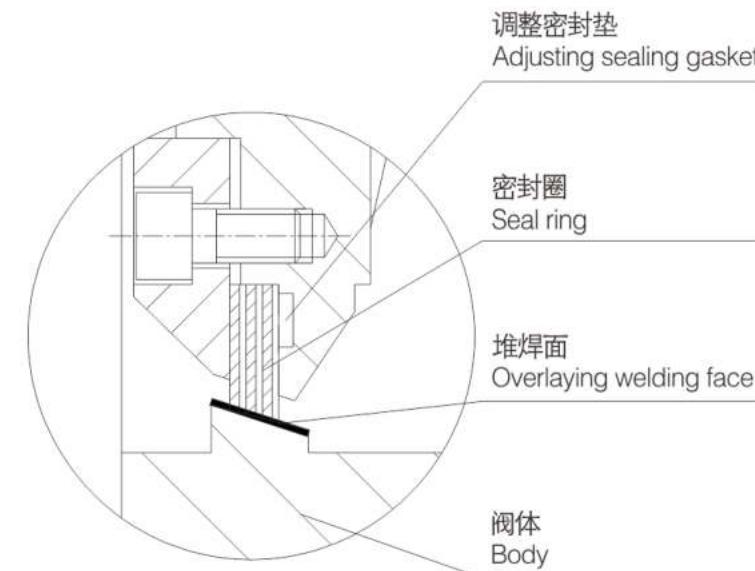

图5-3 三偏芯复合式密封示意图
Figure 5-3 Schematic figure of three-eccentric compound type seal

三偏芯金属硬密封蝶阀

Triple eccentric metal hard seal butterfly valve

三偏芯复合式蝶阀优化了阀座与密封圈之间的接触特性。接触角大于锁定锥度范围，从几何形状上排除了卡死的可能，从而确保阀门开关必需扭矩在整个使用过程中不会发生很大的变化。阀座表面堆焊耐温、耐腐蚀合金材料，密封圈采用软硬层叠式不锈钢片夹弹性密封板(四氟板、橡胶板、石墨板等)(图5-3)。使其具有金属硬密封和弹性密封的双重优点，通过阀密封圈弹性实现的当向阀杆施加扭矩时，该阀密封圈与阀座接触面是“锥中锥”结构，两个锥均为斜锥。密封圈与金属阀座之间的接触角轻微的“楔块效应”，使密封圈发生柔动和径向压缩。正由于阀座与密封圈之间均匀接触，从而实现用最小的转矩实现最严密的关断。本蝶阀密封面选用不锈钢制作，具有耐腐蚀、耐高温、使用寿命长。而且在结构上采用半轴结构，蝶板桁架式结构，蝶板强度高、过流面积大、流阻小、节省能源。结构尺寸短、体积小、重量轻便、操作简单等特点。

The three-eccentric compound type butterfly valve optimizes the contact features between seat and seal ring. The contact angle is higher than the locked taper range, so as to eliminate the possibility of blocking from geometrical shape, and ensure that the torque required for opening and closing the valve will not change greatly during the use. The seat face is subjected to overlaying welding of heat and corrosion resistant alloy materials. The seal ring adopts soft and hard laminated stainless sheet and elastic sealing plate (PTFE plate, rubber plate, graphite plate, etc.) (figure 5-3), so as to have advantages of metal hard seal and elastic seal, which is realized through the elasticity of valve seal ring. When torque is exerted on the stem, the contact face of the seal ring and seat is "cone in cone" structure, and the two cones are all bevel cones. The contact angle between the seal ring and metal seat produces light "wedge effect", making the seal ring produce flexible movement and radial compression. Due to the even contact of seat and seal ring, the tightest shut-off is realized through using the minimum torque. The butterfly valve sealing face is made of stainless steel with such features as corrosion resistance, high temperature resistance and long service life. It adopts the semi-shaft structure, and the disc adopts rack structure. The disc has high strength, large flow passing area, low flow resistance and energy saving. The valve has such features as short structure size, small volume, light weight, simple operation, etc.

型号编制 Model establishment

表(9) Table9

执行机构型式 Actuator type	薄膜式 Diaphragm type	活塞式 Piston type	电动式 Electric type	电液联动式 Electro-hydraulic type
代号 Code	M	S	D	Y

表(10) Table10

执行机构动作形式 Actuator action form	气动双作用横推式 Pneumatic double acting horizontal push type	气动双作用立推式 Pneumatic double acting vertical push type	气动单作用弹簧复位式 Pneumatic single acting spring return type	电动/电液动转角式 Electric/electro-hydraulic rotary angle type
代号 Code	H	S	T	J

表(11) Table11

公称压力PN Nominal pressure	CL150LB	CL300LB	CL600LB	CL900LB
代号 Code	20	50	110	150

表(12) Table12

阀门动作形式 Valve action form	调节型 Control type	二位切断型 Two-position shut-off type	快速切断调节型 Fast shut-off control type
代号 Code	I	II	III

示例:

ZSSWY-20K III -500 气动三偏芯高性能密封蝶阀，公称压力150LB，气开式快速切断调节蝶阀，双作用立推式执行器，公称通径为20"(500mm)。

ZSTWY-50BI-200 气动三偏芯高性能密封蝶阀，公称压力300LB，气关式调节蝶阀，单作用执行器，公称通径为8"(200mm)。

For example:

ZSSWY-20K III -500 Pneumatic three-eccentric high performance sealing butterfly valve; nominal pressure 150LB, air to open type fast shut-off control butterfly valve, double acting vertical push type actuator, nominal diameter 20"(500mm)

ZSTWY-50BI-200 pneumatic three-eccentric high performance sealing butterfly valve, nominal pressure 300LB, air to close type control butterfly valve, single acting actuator, nominal diameter 8"(200mm).

配管安装位置

- 蝶阀可在水平或垂直管道上安装，但气动立推式执行机构一般正立安装(除特殊说明外)见图10。使用前应对管道及压缩空气管路进行吹扫，彻底清洗管路和阀内腔污物、焊渣、润滑油脂等异物。
- 对于公称通径DN≥500的阀门，执行机构建议增加弹性支撑或悬吊装置，以免执行机构过重，影响阀门正常操作。
- 三偏芯高性能密封蝶阀一般为单向结构，请在订货时一定要注明安装位置。如需双向密封蝶阀，请咨询我公司。

Pipe installation position

- The butterfly valve can be installed on horizontal or vertical pipe, but the pneumatic vertical push type actuator shall be generally installed vertically (except those specially noted). See figure 10. Before the use, please scavenge the pipe and compressed air pipe to thoroughly clean away dirty things, welding slag, lubricating grease and other foreign matters in the pipes and valve cavity.
- For valves with nominal diameter DN≥500, it is recommended that the actuator should be additionally provided with elastic supporting or hoisting device. Otherwise, too heavy actuator may influence normal operation of the valve.
- The three-eccentric high performance sealing butterfly valve is generally of single direction structure. Please make sure to specify the installation position when placing orders. If you need double direction sealing butterfly valve, please consult our company.

正确操作

- 阀门在出厂时已经过必要性的性能测试，且按订单要求进行了整定，用户一般可直接安装使用。
- 用手轮操作时，先将气缸内的残余气体通过电磁阀(或控制元件)排空(在气缸内有残余气体的情况下)。
- 双作用气缸先将执行器的平衡阀打开，然后将转换手柄置于“手动”位置，使蜗杆与蜗轮处于完全吻合状态。用手轮操作时请勿用力过大(不可借用其他的外力工具)。
- 特别提示：带手动操作机构的阀门在弹簧复位(关闭阀门)或是气动开启(关闭)阀门过程中，任何一个开度都不能使用“自动手动”切换。
- 操作时，请参照执行器上铭牌指示。
- 对于单作用执行机构，在撤卸气缸时，一定要使用专用工具。

Proper operation

- The valve has undergone necessary performance tests before leaving the factory, and setting has been made according to order requirements, so users can install and use it directly.
- When using the handwheel for operation, first empty the residual gas in the cylinder through the solenoid valve (or control element) (in case there is residual gas in the cylinder).
- For the double acting cylinder, first open the balancing valve of the actuator, turn the change-over handle to the "manual" position to make the worm and worm gear fully fit with each other. Do not use excessive force when operating the handwheel (other tools shall not be used).

Special hint: For the valve with manual operating mechanism, during spring reset (closing the valve) or pneumatic valve opening (closing), any opening cannot be switched through using "automatic-manual".

- During operation, please refer to the indication on the nameplate of the actuator.
- For single acting actuator, please use special tools when removing the cylinder.

维护与保养

- 正常检查：每年进行一次，检查各管接着部分有无漏气，应换O型密封圈或有关螺钉，检查空气的净化情况，排除过滤器中冷凝水，检查各螺纹连接部有无松动。
- 输出轴上的轴承、手操机构切换轴上的轴承等转动部位每三个月或半年加一次足够的润滑油脂。
- 检修时应检查并清洗缸套及活塞，如发现O型密封圈有损坏或老化时应及时更换，装配时应在气缸壁和密封圈沟槽内涂滑油，并注意缓慢将活塞推入气缸，以免损坏O型密封圈。
- 气源压力应在0.35~0.7MPa(G)范围内，气源应经除尘、脱水等净化处理。

Maintenance and servicing

- Normal check: Carry out normal check once every year to check if there is any gas leakage at the connecting parts, and replace the O rings or relevant bolts if there is any. Check the air cleanliness. Eliminate condensate in the filter. Check if the connecting parts of all threads are loose.
- The bearings on the output shaft and the bearings on the change-over shaft of the manual operating mechanism and other moving parts shall be added with sufficient lubricating grease once every three or six months.
- During maintenance, please check and clean the cylinder cover and piston. If it is found that the O rings are damaged or age, please replace them in time. During assembly, please spread lubricating grease on the cylinder wall and inside the groove of seal rings. Notice that the piston shall be slowly pushed into the cylinder. Otherwise, the O rings may be damaged.
- The air supply pressure shall be within the range of 0.35~0.7MPa(G). The air supply shall be subjected to dust removing and dehydrating treatment.

订货须知

当您订货时，请明确注明以下各项内容：

- 阀门口径及阀内孔径
- 阀体规格及连接形式
- 阀体材质及阀内件材质
- 阀门特性及阀芯形式
- 阀盖形式
- 执行机构型号是否配手操及气源压力
- 阀门动作(气源故障要求)
- 是否要带定位器、电磁阀、空气过滤减压阀等
- 是否要除油、除水、无铜等特殊规格
- 配管尺寸、管壁厚(入口侧、出口侧)
- 流体的名称、状态(液、气、蒸汽等)
- 常用流量及最大、最小流量
- 流体压力及压差(全开、全闭时)
- 流体的温度、比重或密度
- 流体的粘度、有无浆料、闪蒸
- 是否用于高压、高温场合
- 其他特殊要求

Ordering notes

When placing orders, please specify the following items:

- Valve size and valve bore
- Body specification and type of connection
- Body material and trim material
- Valve characteristic and valve plug form
- Bonnet form
- Actuator model and shall it be provided with manual operating mechanism and air supply pressure
- Valve action (air supply failure requirement)
- Shall it be provided with positioner, solenoid valve, Air set, etc.
- Are products of special specifications such as oil removing, water removing and copper-free needed
- Tube size, tube wall thickness (inlet side, outlet side)
- Fluid name and status (liquid, gas, steam, etc.)
- Common flow and maximum and minimum flow
- Fluid pressure and differential pressure (during full opening and full closing)
- Fluid temperature, specific gravity or density
- Fluid viscosity, containing slurry or not, flash evaporation
- Is it used for high pressure and high temperature applications
- Other special requirements
